

DAHLIAS

Dwarf Dandy

Mignon Mixed

- Most of our dahlia varieties are dwarf varieties, growing to a maximum of 2ft / 60cm tall. This means they shouldn't need supports to grow, and are ideal for growing in patio pots.
- Dahlias like a fertile and well drained soil in a sunny position. They are half-hardy annuals, although they will from tubers during their growing season, and if the tubers are protected from frost, they will regrow the following year.
- If you 'deadhead' the flowers once the blooms are spent then this will encourage the plant to keep producing new flowers, and they will keep flowering through until the first frosts.

Red Skin

Collarette (up to 70cm) tall
