- Blackberry picking is part of growing up, and thankfully something a lot of us don't grow out of. Whether we eat them fresh from the bush, in crumbles, pies or even turned into wines and spirits, they are fantastic, but the wild ones are generally a lot smaller, sometimes quite tart, and not to mention a bit prickly to pick.
- Cultivated blackberries are a superior fruit: larger, sweeter and quite often less prickly, or even thornless in some cases. They won't take over the garden and are ideal to train against the side of a shed or a wall, which again makes it even easier to harvest.
- Loganberries and Tayberries are Blackberry / Raspberry hybrids, and should be trained in a similar way to blackberry plants. The berries look more like raspberries, but are larger, and make fantastic jams and desserts, fresh or cooked.
