

CITRUS TREES

Citrus trees can be grown in the UK if they are kept in pots and brought inside during the winter as they are not fully hardy. In the summer months they can be moved outside to a warm patio. They will generally grow between 1 - 1.5m tall and don't require much pruning. They are also self-fertile, so you won't need to grow more than one (unless you want to...).

We offer the following citrus trees:

- Lemon
- Lime
- Kaffir Lime
- Calamondin
- Caviar Lime
- Yuzu
- Other varieties can be ordered, just ask us.

We will aim to bring a variety of citrus to the garden shows, but cannot always bring them to the smaller events due to space constraints. However, should you wish to pre-order one, we will bring it to your preferred event.
