

SB PLANT INVIGORATOR

SB Plant Invigorator is a plant pesticide, foliar feed and mildewcide

It controls a wide range of important pest species including Whitefly, Aphid, Spider Mite, Mealybug, Scale and Psyllid. Due to the physical mode of action these pests will not become resistant to **SBPI**, and it is suitable for use on all edible and ornamental crops

The world is becoming much more “environmentally aware”. Consumers are demanding lower and lower minimum residue levels (MRL) in fruit, vegetables and now even ornamental crops.

Unlike many other pesticides SBPI does not harm birds & bees

It is used by professional and amateur growers and gardeners worldwide.

SBPI has a “physical mode of action”. The mode of action is non-chemical and non-biological. Pests will not become resistant to **SBPI**.

There is no harvest interval after applying **SBPI**. The efficacy is excellent.

- Physical mode of pest and mildew control
- Pests will not become resistant
- No harvest interval
- Suitable for use throughout the year
- Plant wash for a cleaner, shiny appearance
