

MINT

Mint isn't just mint. We all know the ubiquitous garden mint, that takes over your garden if you don't contain its roots. It's best grown in a pot to keep it from becoming a nuisance, and this also makes it easy to split it down into clumps so you can keep refreshing it to keep it productive. We offer numerous varieties of mints, all offering a slightly different taste and smell, so feel free to have a good sniff!
