

# CABBAGE

- Cabbages are an incredibly versatile plant. There is always a cabbage that can be harvested whatever the season, and accordingly we offer a wide range of cabbages.
- As with any brassica plant, cabbages can be susceptible to whitefly in the warmer months. I use 'enviromesh' as it is rot-proof and worth the investment as it lasts many years.
- To protect against damage by pigeons in the colder months, it is advisable to protect them with netting, but use a net with larger holes to prevent it collapsing under snow or being blown away in a storm.

Savoy

Red ballhead

Pointed

Green ballhead
